AIR QUALITY PLANNING
AND STANDARDS

Mr. Mark Klein
FMI Products, LLC
2701 South Harbor Boulevard
Santa Ana, California 92704

Dear Mr. Klein:

We are pleased to acknowledge that the FMI Products, LLC GCAT50 fireplace meets the Phase 2 qualifying emissions level under the EPA Wood-Burning Fireplace Program. Thus, you may use the qualifying labels and hangtags in accordance with the Partnership Agreement Guidelines. Information regarding this model will be posted on the EPA website <http://www.epa.gov/burnwise/fireplacelist.html>.

This acknowledgement is based on your signing the Fireplace Partnership Agreement, our review of the report from Myren Consulting Test Laboratories submitted to EPA, dated May 29, 2010 and the submittal of an appropriate Owner's Manual that covers operation of the fireplace with the catalyst. EPA recommends that the catalyst be replaced every 3 to 5 years in this fireplace. The test reports indicates that this fireplace has an average emissions level of 4.4 grams of fine particles per kilogram of wood burned. This emission level is below the qualifying Phase 2 emission level of 5.1 g/kg.

The enclosed CD contains a template for use in generating the phase 2 qualified hangtags per the program Partnership Agreement for this fireplace model. If you have any difficulty in accessing or using this material, please do not hesitate to contact me at (919) 541-5383.

Thank you for your participation in EPA's Wood-Burning Fireplace Program and your interest in improving air quality.

Sincerely,

A handwritten signature in black ink that reads "Thomas N. Braverman".

Thomas N. Braverman
