

Wood Boiler Retrofit

Protect the Air You Breathe with PureSky Technology

Many homes across the nation use Outdoor Wood Boilers or Wood-Fired Furnaces for central heat. Although they get the job done, Outdoor Wood Boilers have a reputation for creating nuisance smoke that is harmful to the environment.

Environmental agencies are tightening emission restrictions, but replacing your wood boiler can be expensive and inconvenient. FMI Products has developed a solution with Pure Sky Technology!

PureSky is a retrofit emission control device that easily installs into your current wood boiler; an effective and affordable solution which reduces emissions and visible smoke up to 95%!
